a Damage population
Defectors N_D (median, IQR)
Sweep
b Interface diagnostic self-stabilises at marginality
J (median, IQR)
Sweep
c Resource adaptation at the interface
Boundary cooperator resource
Sweep
d Per-sweep drift calibration, pooled
frozen-state $\Delta N_D = J$
fitted $\Delta N_D = 0.74J$
Realised ΔN_D per sweep (bin mean)
J predictor (one resource substep ahead)
e Initial interface diagnostic
J before first sweep
f First-sweep response
Realised ΔN_D, sweep 1
Single (fresh)
Compact 16 (fresh)
Compact 16 (equilibrium field)
Random 16 (fresh)
Random 16 (equilibrium field)
